PAT. NO.	Title
1 D486,807	Wireless communications device
2 D486,806	Wireless communications device
3 6,624,776	Method and system for adjusting the dynamic range of an analog-to-digital converter in a wireless communications device
4 6,609,005	System and method for displaying the location of a wireless communications device wiring a universal resource locator
5 6,594,482	Controlled transmission of wireless communications device identity
6 6,546,265	Portable wireless communications device
7 6,522,894	Simplified speaker mode selection for wireless communications device
8 6,492,960	Plastic or die-cast antennas for a wireless communications device
9 6,484,022	Wireless communications device having externally controlled transmission of identity
10 6,421,373	Spread spectrum wireless communications device
11 6,397,053	Reduction of power consumption with increased standby time in wireless communications device
12 D457,520	Input controls for a wireless communications device
13 D456,794	Wireless communications device
14 6,380,910	Wireless communications device having a compact antenna cluster
15 D456,394	Front cover and display for a wireless communications device
16 6,359,598	Plastic or die-cast antenna for a wireless communications device
17 6,349,225	Hearing protection for a wireless communications device
18 6,327,484	Wireless communications device having integral laser pointer
19 6,285,324	Antenna package for a wireless communications device
20 6,278,413	Antenna structure for wireless communications device, such as RFID tag
21 6,201,871	Secure processing for authentication of a wireless communications device
22 6,198,946	Firmware upgrade method for wireless communications device, and method for supporting firmware upgrade by base station
23 6,041,221	Circuit and method for verifying data of a wireless communications device
24 5,987,010	System and method for providing FDD and TDD modes of operation for a wireless communications device
25 D407,091	Front panel for a wireless communications device

IEEE Wireless Communications

Editor-in-Chief

Michele Zorzi

IEEE Wireless Communications is designed for individuals working in the communications and networking communities. It covers technical and policy issues relating to personalized, location-independent communications in all media (and combinations of media), and at all protocol layers. Both wired and wireless communications will be covered as well as computing, the mobility of people, communicating devices, and personal services. Each issue of this interdisciplinary magazine provides articles of high quality and depth concerning the revolutionary technological advances in personal, location-independent communications and computing.

IEEE Wireless Communications also available [online](#).

Six times a year, articles in *IEEE Wireless Communications* examine different aspects of key PCS concerns, such as:

Current Issue

Call for Papers

Submission Guidelines

Editorial Board

Purchase Back Issues

- Personal portable telephones, multimedia devices, digital assistants, and communicating palmtop computers.
- Registration and handoff protocols, messaging, and communications and computing requirements.
- Network control and management for protocols associated with routing and tracking of mobile users.
- Location-independent numbering plans for movable personal services.
- Personal profiles, personalized traffic filtering, and other database-driven aspects of personal communications.
- Link access technologies and protocols.
- Radio and infrared channel characterization and other microcell-based personal communication systems.
- Satellite Systems and Global Personal Communications.
- Traffic management and performance issues.
- Policy issues in spectrum allocation, industry structure, and technology evolution.
- Applications, case studies, and field experience.
- Intelligent vehicle highway systems.
- Guides to the literature.

Regular features include:

- New product announcements
- A scan of the literature, industry news
- Upcoming Conferences
